If you are serious about a career in the e-business sector, Canadian Business College has the training and the technology to help get you started in this exciting, fast-paced industry.

For the fifth consecutive year, Canadian Business College is, once again, the recipient of the prestigious gold Consumers' Choice Award for excellence in computer training. The Consumers' Choice Awards are conducted by a leading independent research firm, and the winners are determined by the public who base their decisions on quality, service, value and appearance.

"We're delighted to be chosen for excellence in computer training," says Mazher Jaffery, director. "Our programs and facilities are state-of-the-art, and our trainers are experienced in their professions and committed to life-long learning."

Established in 1992, The Canadian Business College has an impressive track record for graduates seeking work in the business community. For instance, almost 90% of graduates find work in their field within six months.

In response to the fast pace of change in today's business world, the Canadian Business College prefers a practical, hands-on approach to teaching, as opposed to the traditional approach, where students absorb information that they won't use until after they graduate.

The instructors at Canadian Business College serve as project leaders and encourage students to put the knowledge they acquire into practical use. Students receive professional instruction in using Microsoft, Oracle, IBM and other software, which includes theoretical knowledge, project management skills and analytical thinking.

The Canadian Business College is also partnering with Sun Microsystems as an Authorized SUN Education Centre, offering Java and Solaris Certification.

At Canadian Business College, nine diploma programs are offered that are registered with the Ontario Ministry of Training, Colleges and

Universities. The diploma programs are both full- and part-time, and range from three months to two years in duration.

Numerous certification courses are available for professionals. These courses, designed by industry leaders such as Microsoft, Oracle, SUN and Cisco, include Microsoft Certified Systems Engineer (MCSE) and A+ certification training, MCSD, MCDBA, CCNA, OCP (DBA, DBO, JDeveloper), and SCJP. Students must meet the high standards of these companies in order to obtain certificates from them.

In addition, The Canadian Business College offers University certificates in partnership with The University of Cambridge. Graduates of The Canadian Business College business IT and business administrator diploma programs can obtain an Information Technology Certificate administered by the college and marked by the university.

The Canadian Business College has several new Business and E-Business Software Engineering Diploma programs that run from four months to two years.

"Today's education needs to be a blend of the old economy and the new," says Mr. Jaffery. "We offer the courses - such as accounting and office skills - that give you a foundation for success in business, as well as the cutting-edge technology needed to get ahead in the 21st century."

Canadian Business College offers a wealth of student assistance measures to help students make the most of their education.

These measures include: career counselling, free assessment tests, unlimited computer lab use for current students, free student resources including e-mail and Internet access, resume writing, colour and black and white laser printing, job search assistance seminar, Prometric testing, IT University Certificates, Comptia, Microsoft and Oracle, Oracle examination discount coupons, and more.

Qualified Canadian students can arrange financing or obtain an educational line of credit by applying at the school. Tax receipts are issued upon graduation.
